### **Custom Sconce Lighting Fixtures from Sequoia Lighting**

La Habra, CA - Sequoia Lighting Corporation, manufacturers of quality lighting products, now offers custom designed Sconce lighting fixtures. The primary purpose of the oversized light fixtures is to illuminate large building facades, entrances and adjacent areas.

The Sconce lights are typically triangular in shape with sizes exceeding 6 ft. in length and 4 ft. in depth. They are designed to mount onto the exterior surfaces of buildings. Other shapes and sizes are available to complement different architectural themes.

Each Sconce light is constructed of a combination of 14 gauge and 16 gauge cold rolled steel. The fixtures are finished with a five-stage powder coating process in order to resist corrosion from harsh, outdoor environments. A variety of custom colors can be ordered.

The fixtures come with standard 4-ft. fluorescent lamps. Other lamp types and sizes are available upon request. White, translucent Lexan lens panels provide an even distribution of light onto building facades. The luminaires are UL Approved for wet locations.

For more detailed information on the Sconce lighting fixtures or on the complete line of Sequoia Lighting Products, call 877/888-7880 or visit Sequoia Lighting's web site at [sequoia-lighting.com](http://sequoia-lighting.com).
