

FOR IMMEDIATE RELEASE

September 6, 2004

The Sequoia Lighting has expanded its manufacturing facilities in order to accommodate an increased demand for Cal Trans Approved Metered Service Cabinets.

Sequoia Lighting's manufacturing facilities have been updated with new, state-of-the-art computer controlled metal fabrication equipment. Highly skilled personnel have also been hired. This expansion gives Sequoia Lighting the ability to increase production output while significantly reducing manufacturing lead-time.

Sequoia's Cal Trans Meter Service Cabinets offer several key features. Each cabinet is prewired and tested to meet NEMA standards. They are UL listed and meet utility company requirements for 100 & 200 amp service with single or dual metered cabinets for single or three phase applications.

The exterior of each cabinet is constructed of 12 gauge, cold rolled steel with interiors featuring 14-gauge steel. Optional aluminum and stainless steel cabinets are also available. All exterior seams are completely sealed with continuous welds in order to protect interior components from harsh, outdoor elements. Every cabinet features double doors with separate compartments for meters and controls.

In accordance with State of California specs., the cabinets are finished with a seven stage, powder-coated process. Standard ranch green or mint green colors are offered. Custom colors are also available. Cabinets can be fabricated in stainless steel or aluminum to meet virtually any application.

The Metered Service Cabinets are designed for quick and easy installation onto concrete pads.

In addition to offering an extensive line of Cal Trans approved products, Sequoia Lighting Corporation provides customers with the design, fabrication and installation of quality Nostalgia Lighting products, Roadway Products and HID Lighting systems.

For more information on the complete line of Sequoia Lighting products, call 877/888-7880 or visit Sequoia Lighting's web site at sequoialighting.com.
