Sequoia Lighting awarded LA City Hall project

La Habra, CA - The Sequoia Lighting Corporation is scheduled to participate in the renovation of the Los Angeles City Hall underground parking structure. Renovations for the parking structure include new signage, fresh paint and lighting upgrades.

LA City officials have selected QL Induction Lighting products from the Sequoia Lighting Corporation for use in this project. They based their decision on the results of a year long energy study on QL Induction Lighting conducted by Sequoia's engineering staff.

The benefits of QL Induction Lighting are many. QL Induction Lighting is virtually maintenance free. The lamp life expectancy of 80,000 to 100,000 hours generally exceeds five to ten times that of standard HID systems. It generates a crisp white light and is low in ultraviolet rays, which will not fade or damage materials. Lamp output will accommodate up to 12,000 lumens. Sequoia utilizes Phillips ballast kits in all of their QL lighting fixtures.

The LA City Hall project is expected to be completed in approximately two years.

Other cities that have utilized Sequoia's QL Induction Lighting products for use in their projects include Newport Beach, Fullerton and Orange.
