Security Street Lighting fixtures from Sequoia Lighting

La Habra, CA - Sequoia Lighting Corporation, manufacturers of quality lighting products, has expanded its product line to include Security Street Lighting fixtures.

Sequoia's Security Street Lighting fixtures offer superior lighting performance and will deliver years of trouble free service. The luminaires are aesthetically pleasing to the eye and are designed to blend in with a wide range of environments. The fixtures are easy to install, easy to operate and require low maintenance.

Constructed of heavy duty spun aluminum, Security Street Lighting fixtures come in a variety of standard shapes, sizes and colors. Each fixture undergoes a three stage finishing process, which entails cleaning, etching, applying a primer coat, and finally, powder coating or wet painting. Standard colors include black, bronze, green, gray and white. Custom shapes, sizes and colors can also be ordered.

Light from each fixture is evenly distributed via a heat resistant lens. The lens is constructed of high impact glass, acrylic or polycarbonate and is UV stabilized. Light source options include high pressure sodium, metal halide and QL Induction.

Sequoia's Security Street Lighting is designed for installation in a variety of applications including parking lots, transportation terminals, office complexes, school campuses, shopping malls, parks/recreational areas and bike pathways, to name just a few.

In addition to offering Security Street Lighting, Sequoia Lighting Corporation provides customers with the design, fabrication and installation of quality street lighting products, roadway products and HID Lighting Systems.
