### **Sepulveda Tunnel Renovation Project utilizes Sequoia Lighting Products**

La Habra, CA - The Sequoia Lighting Corporation, manufactures of quality lighting products, recently participated in the renovation of the Sepulveda Tunnel. The City of Los Angeles Bureau of Street Lighting (LABSL) supervised the project.

Located near the new Getty Center in Los Angeles, CA, the Sepulveda Tunnel has served as one of LA's major thoroughfares for over sixty years.

In order to meet current IES Roadway Lighting Standards, the tunnel's existing light sources required upgrading with brighter and more efficient lighting.

The Sequoia Lighting Corporation was contracted by the LABSL to supply replacement HID lighting for the project. Since the luminaires in the tunnel were imbedded in the tunnel's ceiling, special retrofit products were needed. Additionally, the harsh environment found in the tunnel necessitated the use of weatherproof components in the new fixtures. Sequoia's engineering department worked with LABSL engineers on the design of the new, custom retrofit luminaires.

Engineering, fabrication and installation of the new light fixtures for the Sepulveda Tunnel was completed in approximately one month.

The new lighting in the Sepulveda Tunnel has resulted in safer driving conditions for LA motorists. Lighting levels now exceed current safety standards set forth by the IES and other governing agencies.
