Sequoia Lighting Corporation expands manufacturing facilities

La Habra, CA - Sequoia Lighting Corporation, manufacturers of quality lighting products, presents the Super Starter, a single unit, and universal replacement for multiple starters.

The Super Starter reduces starter inventory to just one starter. The single unit replaces all two and three leading type HPS starters.

Measuring only 1" x 3", the starter's small size assures easy installation. No tools or special receptacles are required thus reducing labor and field installation time.

The Super Starter's non-metallic enclosure is epoxy encapsulated to protect its components from harsh fixture environments. The unit also meets UL and ANSI high-pressure sodium lamp specifications.

The Super Starter generates its own starting pulse and will start all high-pressure sodium lamps from 35 watts through 400 watts. Each unit is designed for long life even in an open circuit mode.

In addition to offering the Super Starter, Sequoia Lighting Corporation provides customers with design, fabrication and installation of quality lighting products including Nostalgia and Contemporary street lighting and HID Lighting Systems.
