LAP 11C

LAP 11D

All Lighting Luminaire arms are constructed from aluminum and are one piece. Each arm is fabricated with a post top type pipe, made for luminaire mounting. Luminaire arms are welded by a certified welder and can be modified to meet the customer's exact lighting specifications. Post top mounting sections and luminaire mounting sections shall be heavy wall aluminum. All hardware shall be stainless steel.

Finishing process for each luminaire arm configuration consists of a three stage process, first cleaned and etched, then primed and lastly powder coated. Standard colors are black, bronze, green, gray, white, blue or galvanized. Custom colors are also available upon request.

Luminaire arms are designed to accommodate either round or square poles. Each arm is welded to the pole by a certified welder. All luminaire arms are designed for both single and double mounting applications. Custom configurations are also available in the luminaire arm section.

For information regarding arms, brackets, number of luminaire required, please see ordering information.
